

Facile Volant

Easy travel in an age of stress

Have you ever wished you knew if your flight was going to cause you hassle?

Now, with Facile Volant, we can offer you a way to know in advance!

Dodge the stress, and swerve the worry

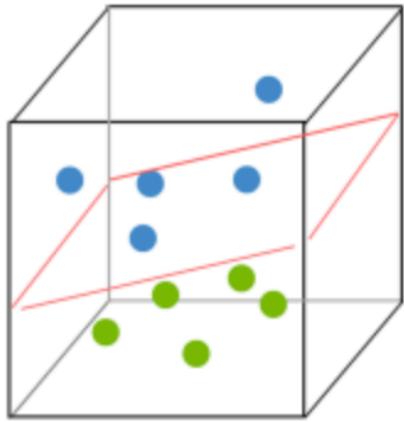

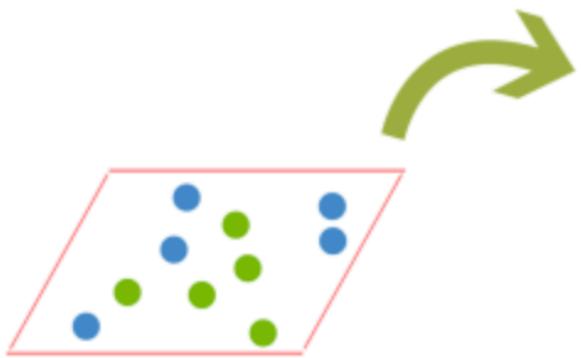

With in depth and constantly updating machine learning models, we can offer you the support you need

In Wisconsin, a delayed flight leaves, on average, more than 40 minutes after it is scheduled

Some airlines we've already utilised
for our data...

	precision	recall	f1-score	support
0	0.92	0.98	0.95	7325
1	0.93	0.77	0.84	2675
accuracy			0.92	10000
macro avg	0.92	0.87	0.89	10000
weighted avg	0.92	0.92	0.92	10000

The accuracy score is 0.9216

In flight schooling...

- We have utilised a set of machine learning models to deliver you the best service possible
- Harnessing cutting edge data science technology, we have created a Support Vector Machine
- This will classify any data we input into it with a 92% accuracy, to let you know if your flight is likely to be delayed

So how does this help me?

Check each flight individually!
More reliable flight somewhere else? Or
with a different provider? We can let
you know!

This will save you money, time, and
most importantly, the total lack of
hassle

Trust us, and we'll see you get where
you need to go

And what of the future?

- With the uncertainty around the coronavirus, the flight industry as we know it may never be the same again
- Once the travel bans begin to recede, airlines will be in turmoil, trying to recover and plan out regular service again
- During this period, we are here to assist you, and make sure you know when to trust the airline's timings, or when to choose elsewhere
- For when the time comes, Facile Volant will be there for you to make informed, reliable decisions
